Grade	UNS No.	Properties and typical applications
<b>Austenitic stainless steels</b>		
253MA	S30815	Excellent resistance to scaling and useful creep strength at temperatures up to 1150°C.
301	S30100	Combination of strength and ductility to withstand severe forming methods. Corrosion resistance comparable to 302. Rail cars, automotive components.
302HQ	S30430	Wire for severe cold heading such as the manufacture of cross recess screws. Corrosion resistance at least equivalent to type 304.
303	S30300	Free machining grade. Domestic and mild industrial environment. Water low in chlorides. Nuts and bolts, shafts, fittings. Corrosion resistance lower than 304.
304	S30400	Good resistance to corrosion, good for malleability and weldability. Most commonly used grade. Wine storage, laundry and kitchen products, water, food, architectural, cryogenic and high temperature applications. UGIMA 304 – improved machinability bar with same properties.
304L	S30403	Corrosion resistance as for 304. Low carbon variation for heavy gauge welded sections.
304H	S30409	Corrosion resistance as for 304. High carbon gives improved high temperature strength.
309S	S30908	Excellent resistance to corrosion, particularly attack by hot sulphur compounds in oxidising gases. Sulphite liquors and acids such as acetic, citric, lactic and nitric. Welding wire for joining dissimilar steels.
310	S31000	Excellent corrosion resistance at normal temperatures. Good resistance to oxidation and carburising atmospheres in high temperatures over 850°C to 1100°C. Welding wire for joining dissimilar steels.
316	S31600	High corrosion resistance to the complex sulphur compounds used in pulp and paper processing. Also resists attack by marine and corrosive industrial atmospheres. Suitable for mild seacoast atmosphere, pulp and paper, heat exchangers, propeller shafts, dyeing equipment. UGIMA 316 improved machinability bar, with same properties.
316L	S31603	Corrosion resistance as for 316. Low carbon variation, suitable for heavy gauge welding.
317L	S31703	Improved corrosion resistance over type 316. Often successfully applied where type 316 has given only moderate performance. Applications such as acetic acid distillation, pulp and paper machinery, ink and dyeing processes. 317L is a variation of 317 suitable for heavy gauge welding.
321	S32100	Excellent corrosion resistance, equivalent to 304 in the annealed condition and superior if the application involves service in 425°C-870°C range. Typical applications include expansion joints, furnace parts, aerospace and power industries, heat exchangers and steam generators.
347	S34700	This grade is resistant to chromium carbide precipitation. Most commonly found as a consumable for welding 321.
904L	N08904	'Super austenitic' grade with very high corrosion resistance, especially to strong acids and chlorides. Frequently used in sulphuric acid service.

Note 1: Single values are maxima unless otherwise stated.

Note 2: Hardness specification limits given are HRB = Rockwell B scale, HRC = Rockwell C scale, HB = Brinell Hardness.

Note 3: 3CR12 generally conforms with both ASTM A240 grade S41003 and with EN 10088 Parts 1 and 2, grade 1.4003. Properties quoted are from EN 10088.2.

Note 4: Mechanical properties shown are for the commonly available form listed; properties of other forms for the grade may vary.

Grade	UNS No.	Properties and typical applications
<b>Ferritic stainless steels</b>		
3CR12 (Note 3)	1.4003	Useful corrosion resistance particularly in wet abrasion environments. Readily welded and formed into tanks, flues, bins, chutes, rail wagons, etc.
409	S40900	Resists atmospheric and automotive exhaust gas corrosion. Extensively used in auto exhaust systems.
430	S43000	Good combinations of corrosion resistance, formability and mechanical properties. Typical applications include automotive trims, element supports, cold headed fasteners, refrigerator doors.
430F	S43020	430F is a free machining version of 430, suitable for high speed machining. Corrosion resistance is lower than 430.
434	S43400	Molybdenum improves the pitting resistance over grade 430. Good for automotive trim components.
<b>Ferritic/Austenitic (Duplex) stainless steels</b>		
2205	S31803	2205 microstructure is approximately 50% ferrite and 50% austenitic, which results in the steel possessing high strength and hardness, and resistance to erosion, fatigue, stress corrosion cracking and pitting and crevice corrosion. Applications in marine, chemical and petrochemical industries.
UR52N <sup>+</sup>	S32520 S32550	'Super Duplex' grade exhibiting exceptional resistance to hot chlorides and sulphides with high strength. Applications in marine, chemical and petrochemical industries.
<b>Martensitic stainless steels</b>		
410	S41000	Resists dry atmospheres, fresh water, mild alkalines and acids, steam and hot gases. Must be hardened for maximum heat and corrosion resistance. Typical applications include cold heading, bolts, nuts and screws, pump parts and shafts, steam and gas turbine parts, mine ladder rungs.
420	S42000	Good resistance in the hardened condition to the atmosphere. Food, fresh water and mild alkalines or acids. Higher carbon hardenable grade. Typical applications include cutlery, surgical instruments, shear blades, needle valves.
431	S43100	Excellent resistance to a wide variety of corrosive media, approaching that of 304. High tensile and torque strength. Pump and boat shafts, nuts, bolts and marine hardware.
<b>Precipitation hardening steel</b>		
630	S17400	Precipitation hardening ('aging') treatment after machining gives high strength without distortion. Corrosion resistance similar to type 304. Pump shafts and valve spindles.

Note 1: Single values are maxima unless otherwise stated.

Note 2: Hardness specification limits given are HRB = Rockwell B scale, HRC = Rockwell C scale, HB = Brinell Hardness.

Note 3: 3CR12 generally conforms with both ASTM A240 grade S41003 and with EN 10088 Parts 1 and 2, grade 1.4003. Properties quoted are from EN 10088.2.

Note 4: Mechanical properties shown are for the commonly available form listed; properties of other forms for the grade may vary.
